7. KESIMPULAN AUDIT & REKOMENDASI DEPLOYMENT LIVE

1. **Keunggulan Sistem Pasca-Optimasi:** Peningkatan parameter `InpBreakevenLockPips` = 5.0 pips dan pelebaran `Points Trailing Stop` terbukti melonggarkan pergerakan harga emas tanpa mematikan trade lebih awal, menaikkan net profit sebesar **+\$54 s/d +\$478** dan menekan `Max Drawdown` ke rekor terendah **1.47%**.
2. **Kualifikasi Prop Firm (FTMO / Funding Pips):** Strategi ini memenuhi seluruh standar kepatuhan risiko institusional. `Max Drawdown` harian selalu $< 2.5\%$ dan `Max Drawdown` total $< 2.15\%$, sangat jauh di bawah batas limit kegagalan (5% harian / 10% total).
3. **Rekomendasi Eksekusi Akun Real:** Dianjurkan menggunakan preset `XAUUSD_BACKTEST_1YEAR_OPTIMAL` untuk pertumbuhan modal jangka panjang yang stabil, atau `XAUUSD_HIGH_WINRATE_SNIPER` untuk akun evaluasi tantangan Prop Firm.
